

Yearly Disease Report

1) The data shows a total of eight disease cases across three illnesses. Influenza had the highest number of recovered cases, matching its case count. COVID-19 had one more case than recovery. Malaria had equal cases and recoveries.

2) Influenza, COVID-19, Malaria

3) Focus public health resources on preventing and treating Influenza due to its high caseload. Further investigation is needed to understand the disparity between COVID-19 cases and recoveries.
